

About Us

About TAG Business Tools

TAG Business Tools is dedicated to the task of producing simple, low cost, low maintenance software for small businesses interested in engaging in XML based eCommerce across the Internet. Our software is designed to:

- Reduce the cost of eCommerce.
- Reduce the complexity of eCommerce.
- Reduce the time to implement eCommerce. Why?

Every small business will soon face the fact that they must learn to participate in the complex world of supply chain automation. Standards bodies are paving the way, pioneered by organizations like RosettaNet and ebXML. Every small business must soon learn how to integrate their accounting , order entry and inventory systems with those of their business partners and, eventually, with those of their customers.How?

Big business is forcing the pace. But their problems are complex, steeped in tribal practices and territorial wars. Change comes slowly and the software they must buy is expensive, convoluted and necessarily intricate. Small business has fewer gears, less bureaucracy and far fewer resources. By distilling out the essence of eCommerce, the basics of business transactions from standards like RosettaNet, TAG Business Tools has managed to engineer simple, inexpensive and affordable eCommerce solutions that any small business can deploy.
